DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?

Encapsulation of the code I had in a factory function.

_____

2. What parts of encapsulating your logic were hard?

Making sure data is accessible from outside.
Then making sure changeable variables are able to be changed.
Using getters and setters to accomplish this.

_____

3. Is abstracting the book preview a good or bad idea? Why?

Abstracting the book preview is a bad idea in my opinion.
Because it is not dealing with private data so it's not needed to have this level of abstraction.

_____
